International Overdose Awareness Day

International Overdose Awareness Day is a global event held on August 31st each year and aims to raise awareness of overdose and reduce the stigma of a substance-related death. It also acknowledges the grief felt by families and friends remembering those who have died or had a permanent injury as a result of a substance overdose.

National Recovery Month- September

National Recovery Month (Recovery Month) is a national observance held every September to educate Americans that substance use treatment and mental health services can enable those with a mental and/or substance use disorder to live a healthy and rewarding life.

Recovery Month celebrates the gains made by those in recovery, just as we celebrate health improvements made by those who are managing other health conditions such as hypertension, diabetes, asthma, and heart disease. The observance reinforces the positive message that behavioral health is essential to overall health, prevention works, treatment is effective, and people can and do recover.

Every September, SAMHSA sponsors Recovery Month to increase awareness and understanding of mental and substance use disorders and celebrate the people who recover. The annual theme is Join the Voices for Recovery: Invest in Health, Home, Purpose, and Community.
